EDUCATION

The Ohio State University <i>M.S. Computer Science and Engineering</i> GPA: 3.9/4.0	Aug. 2025 – Dec. 2026 Columbus, OH
The Ohio State University <i>B.S. Computer Science and Engineering</i> GPA: 3.9/4.0	Aug. 2022 – Dec. 2025 Columbus, OH

EXPERIENCE

Nationwide <i>AI/ML Engineering Intern</i> - Built a distributed claims risk classification pipeline on AWS using PySpark, engineering features from claim severity, geography, and historical data to train tree-based models achieving 75% accuracy. - Developed an AI agent that generated production-ready ML repositories with batch and real-time inference workflows, REST APIs, and automated validation suites, reducing model onboarding time by 25%. - Expanded regression test coverage by 35% across 5 production models using AWS, Jenkins, and PyTest.	May 2026 – Aug. 2026 Columbus, OH
Procter & Gamble <i>Data Engineering Intern</i> - Built and deployed a full-stack sales forecasting platform with Plotly Dash, PostgreSQL, Docker, and Kubernetes to support promotion analytics and lift estimation. - Developed a baseline sales prediction algorithm, revealing \$3M+ in profit optimization across key product lines. - Designed validation workflows in Databricks and SQL Server, reducing downstream anomalies by 33%.	May 2025 – Aug. 2025 Cincinnati, OH
Procter & Gamble <i>Software Engineering Intern</i> - Built a PyQt and Selenium form-automation tool that eliminated 750 hours of manual work annually. - Developed a reusable Java and Selenium testing framework that increased automated test coverage by 125%. - Built PySpark ETL pipelines in Databricks on AWS, cutting data delivery time by 80%.	May 2024 – Aug. 2024 Cincinnati, OH
The Ohio State University <i>Graduate Teaching Assistant</i> - Support an upper-level computer graphics and animation course covering Unity, C#, real-time rendering, procedural animation, and agent-based simulation. - Mentor 100+ students through office hours and review sessions while grading assignments, labs, and exams.	Jan. 2026 – Present Columbus, OH

PROJECTS

M.S. Capstone: Multi-Agent Context Engineering - Design and evaluate multi-agent AI systems in Python using retrieval, shared memory, context management, and tool orchestration for long-horizon reasoning tasks. - Built a reproducible evaluation framework for 50+ multi-agent task runs, measuring task reliability, retrieval quality, agent coordination, and failure recovery.	Jan. 2026 – Present
B.S. Capstone: <u>GitHub Repository LLM Chatbot</u> - Built a full-stack RAG chatbot with a Next.js frontend that ingests GitHub repositories, processes 1,000+ code and documentation files, indexes them in Elasticsearch, and answers repository-specific questions - Implemented a hybrid vector + keyword search pipeline using LangChain embeddings and semantic retrieval.	Aug. 2025 – Dec. 2025

TECHNICAL SKILLS

Languages: Python, SQL, Java, JavaScript, TypeScript, C#, C++, C, Kotlin, Ruby, MATLAB
AI/ML & Data: PySpark, Databricks, PyTorch, PostgreSQL, TensorFlow, Keras, Elasticsearch, LangChain, RAG
Frameworks/Tools: AWS, Docker, Kubernetes, Jenkins, Git, Linux, React, Next.js, Node.js, Express, Rails, Unity
